

## ☐ Zarafa

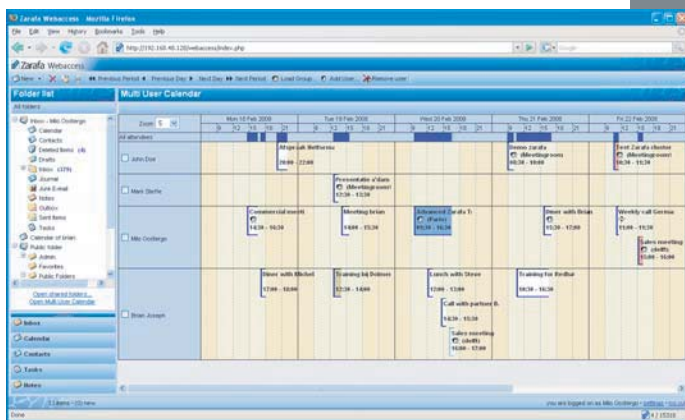

---

*E-mail and calendar collaboration*  
*Unrivalled stable Outlook sharing*  
*Available for several Linux Systems*  
*Push-mail for mobile devices*

Effective communication.  
Share e-mail, calendar and contacts

## ALTERNATIVE TO MS EXCHANGE SERVER

Many system administrators view Zarafa as an alternative to MS Exchange Server. While many possibilities provided by Exchange are actually featured in Outlook, Zarafa is a groupware server platform that enables you to share all these items.

Multi user week calendar in webaccess

## SOME ZARAFSA FEATURES

### Mail

View your own and that of others. All you need is permission to access someone else's folder.

### Calendar

Create appointments for yourself or for a colleague. With a colleague's permission, you can easily open his or her calendar.

### Contacts

Share your business contacts through a public contacts folder and create distribution lists.

### Tasks

Create shared task lists as well as your own, with compact, at-a-glance presentations.

"As an IT manager for a large international publisher, we rely on Zarafa to send e-mail and schedule meetings. From the office we plan more meetings for our account managers, and therefore realise more revenue."

*Mr N. van Steen  
Bayard Press Group*

## BENEFITS

### Effective sharing via multiple clients

- Effective communication by sharing e-mail, calendar and contacts
- Stable Outlook sharing for all Outlook versions by full MAPI implementation (unique)
- Support for IMAP and iCal based clients

### Work wherever you want

- Webaccess compatible with Internet explorer and Firefox
- Remote Outlook synchronisation over HTTPS
- Advanced offline mode for laptop users
- Remote synchronisation & Push-mail of all ActiveSync compatible PDA's and phones

### Technical benefits

- Freedom to integrate your own Linux MTA, like Postfix, Sendmail or Qmail
- Easy migration: Via migration tools, data can be imported and access rights can be configured from the server side

### Compared to MS Exchange

- Cost-effective: initial investment and upgrades cost less than 50% of MS Exchange
- Multi-user week calendar in webaccess
- Brick-level backup with single item and single mailbox restore in 1 minute

### Open standards

- Open architecture supporting Apache, MySQL, PHP
- Gateways to IMAP, POP3, iCal, Caldav
- Integration with existing LDAP environments, like OpenLDAP, MS Active Directory, and eDirectory

## ZARAFa - THE COMPANY

Zarafa is the fastest growing Linux groupware solution in Europe with more than 2000 commercial customers. With offices in Delft (The Netherlands), Hannover, Stuttgart and Belo Horizonte (Brazil), Zarafa wants to be close to its partners and customers. This is reflected in local support desks and more trainings, seminars and trade fair presence than any other groupware company.
